BEFORE & AFTER

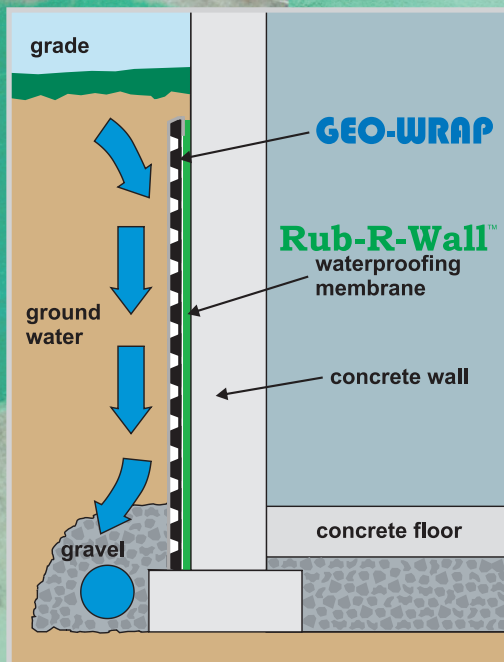

Rub-R-Wall™

ALL POLYMER WATERPROOFING

GEO-WRAP

DRAINAGE COMPOSITE

Geo-Wrap Keeps Foundations Dry

Geo-Wrap is a high performance, high strength drainage composite consisting of three dimensional, high impact

polypropylene core and a non-woven filter fabric, Geo-Wrap performs a multi-faceted role by providing protection for waterproofing systems and managing sub-surface water around building foundations. The non-woven filter fabric over the drainage dimples creates an air gap for reliable ventilation and full surface drainage of water inflow from surrounding soil. Geo-Wrap provides effective protection for a wide variety of applications areas including foundations, retaining walls, planters, lagging systems, underground areas etc.

Rub-R-Wall

is a liquid-applied single-component asphalt free 100% rubber waterproofing membrane. Rub-R-Wall provides a very cost and functionally effective waterproofing of vertical and horizontal below grade structures in residential and commercial construction. The membrane resists the attack of fungus, algae and bacteria and maintains its superior performance properties when exposed to chemicals and gases found in the soil. It has excellent adhesion to most vertical surfaces such as concrete block, poured concrete, plywood and insulated concrete forms (ICF).
